

Programme Information

Henriette Herz Scouting Programme

Programme objective

By introducing the Henriette Herz Scouting Programme, financed by the Federal Ministry of Education and Research (BMBF), the Alexander von Humboldt Foundation has opened up a **new way of accessing the Humboldt Research Fellowship**. This new, active scouting procedure enables successful academics in Germany to directly approach highly sought-after candidates from abroad who have so far *not* applied to the Foundation and invite them to conduct joint research at their institutions. Both in terms of subject and region, the programme thus recruits new collaborative partners for Germany. It also seeks to increase the percentage of women sponsored under the Humboldt Research Fellowship Programme.

In order to recruit these scientific talents, who must have completed their doctorates within the last 12 years, for a research stay in Germany, the Humboldt Foundation wants to utilise the knowledge, international connections and commitment of selected researchers in Germany: every year, in a competitive peer-review process, the Humboldt Foundation will select up to 40 scouts who will then themselves identify junior researchers abroad and recommend them to the Foundation. In this way, up to 100 additional Humboldt Research Fellowships will be granted annually.

In terms of career path, academic performance, originality, degree of innovativeness and future potential, the quality level of the junior researchers being scouted must equate unequivocally to the standards of [successful applicants](#) in the Humboldt Research Fellowship Programme.

Procedure

There is a three-step procedure for granting the additional Humboldt Research Fellowships:

1. **Selection of scouts** by a selection committee in a peer-review process
2. **Award of up to three Humboldt Research Fellowships** to excellent junior researchers from abroad **on the recommendation of the scout** whereby the first fellowship should be granted to a female researcher
3. **Ex-post evaluation of the research fellows sponsored** 12 months after completing the respective fellowship

The ex-post evaluation of research fellows at the end of sponsorship is, moreover, the basis for re-applying to become a scout once again. Both the research fellows and scouts are expected to take part in the ex-post evaluation. Thus, scouts can only submit a new application for permission to recommend additional fellows 12 months at the earliest after the ex-post evaluation of the last fellowship-recipient has been completed. In the interim, they will drop out of the procedure until the selection committee has made a new decision.

The Alexander von Humboldt Foundation aims to select as many new scouts for the programme as possible. Up to 50 percent of the new permissions to recommend a research fellow can be granted to previously active scouts.

Specifications

Scouts can identify up to three potential research fellows abroad and recommend them for a Humboldt Research Fellowship. If the results of the formal review are positive, the fellowship will be granted by the Foundation's head office directly. This will enable scouts to confirm quickly and definitively and recruit the foreign researchers for the Humboldt Network and for research in Germany. Research fellows will be sponsored in the framework of the Humboldt Research Fellowship Programme (see also [Guidelines on the Recommendation Procedure](#)).

Just like all other hosts, scouts become members of the Alexander von Humboldt Foundation's network. During their activity as scouts, they are eligible to receive sponsorship for travel to the institute of potential candidates and will be invited to attend the Foundation's Annual Meeting in Berlin together with their Humboldtian. In the context of alumni sponsorship, the Alexander von Humboldt Foundation can support scouts' visits to the institutes of alumni abroad by covering travel expenses. These visits should be used to continue scientific contacts and for lectures.

Target group

The Henriette Herz Scouting Programme addresses researchers at different career stages from all disciplines in Germany. The following programme lines are available:

- **Up-and-coming researchers** at an early career stage (up to 15 years after completing their doctorates) who have only recently been appointed to a (junior) professorship or head of their own research group, are internationally very well connected, have shown particular commitment to promoting junior researchers and wish to specifically complement their team with a highly-qualified foreign junior researcher.
- **Established researchers:** internationally recognised researchers who have an extensive network which will enable them to identify outstanding candidates abroad and who already have considerable experience in supervising international junior researchers.

Applications from individuals who have not previously acted as hosts for the Humboldt Foundation are especially welcome.

Requirements for applying to become a scout:

- Professorship or comparable executive position in Germany.

Selection criteria

- **Visible academic success:** outstanding, internationally recognised academic record, commensurate with career level (substantiated, for example, by initial awards, outstanding publications, particularly innovative research, approved research proposals)
- Successful **promotion** of junior researchers' **careers**
- **International connections:** extensive international collaborative network with the potential to recruit international research talents
- **Convincing concept** for identifying, recruiting and supervising international junior researchers who would not apply for a Humboldt Research Fellowship themselves

Application procedure

Applications may be submitted to the Foundation online at any time. [Further information on online applications](#), on all the necessary documents as well as access to the online application can be found on the Alexander von Humboldt Foundation's website. It is the responsibility of the applicant to ensure that the application package is complete and accurate.

Applicants are asked to submit the following documents together with the online application:

- **A list of three selected key publications** which substantiate particularly innovative and excellent research
- **A concept for identifying, selecting and supervising international junior researchers** who would not apply for a Humboldt Research Fellowship themselves (approx. 1-2 pages)
- **Two references:** one from an international collaborative partner and one from a supervised junior researcher
- **CV** (2 pages max.)

Selection procedure

Once the application package has been formally checked by head office, it will usually be forwarded to two independent peer reviewers who will provide written reviews. [An independent selection committee](#), convened by the Alexander von Humboldt Foundation and composed of researchers from all disciplines then selects the best applications in the respective round on the peer reviews and in accordance with the financial means at its disposal. The two programme lines will be discussed, and decisions made, in two separate groups. The selection committee will meet twice every year, at the end of May and the end of November.
